Lung Cancer

Deadline: Postmarked no later than March 1, 2022
Credit: 2 AAMA CEUs (gen/cln)  Code: 139694

Directions: Determine the correct answer to each of the following, based on information derived from the article.

T  F
1. A correlation exists between a history of smoking and squamous cell carcinoma.

T  F
2. Neo-adjuvant chemotherapy refers to chemotherapy that is used after another cancer treatment and can be used to kill cancer cells that remain after surgery.

T  F
3. Low-dose computed tomography has been effective in detecting small lung cancer tumors and thus reducing mortality rates, but sometimes radiation from this modality results in cancer in healthy patients.

T  F
4. Lung cancer is the most common form of cancer and accounts for almost 30% of all cancer deaths.

T  F
5. The average age for detection and diagnosis of lung cancer is 50.

T  F
6. Hamartomas are rare, benign lung tumors.

T  F
7. Frequently, symptoms of lung cancer are not evident during the early stages of the disease and only manifest during the later stages of the disease.

T  F
8. Laws forbidding smoking in public places have not been shown to reduce lung cancer cases resulting from secondhand smoke.

T  F
9. Exposure to diesel exhaust, asbestos, and radon increases the risk of lung cancer.

T  F
10. Cancers that originate in organs other than the lungs are not classified as lung cancer and are treated according to the source of the cancer.

T  F
11. The risk of lung cancer for those who have quit smoking for twenty or more years is approximately the same as those who have never smoked.

T  F

T  F
13. Immunotherapy has been shown to be especially effective in treating patients with Stage III and IV cancer.

T  F
14. For younger people and nonsmoking people, the most common form of lung cancer is large cell carcinoma.

T  F
15. Small cell lung cancer is also referred to as oat cell cancer because there is a correlation between a diet high in oats and contracting this type of lung cancer.
